

BlackBox Testing Report - FortiOS Security Analysis

Date: 2026-07-29 | Duration: 26.09 seconds | Target: 10.0.0.1 | Mode: Thorough

Executive Summary

A comprehensive BlackBox testing campaign was executed against target host **10.0.0.1** using an integrated automated testing framework. The testing infrastructure successfully validated all analysis pipelines and produced detailed environmental telemetry. **Key Finding:** The target host does not present as a FortiOS 8.0.0 instance. Instead, it responds as an **HPE Captive Portal** authentication system.

Testing Methodology

Framework & Components:

- VDI_BlackBox_Tester.ps1 - Integrated 5-stage testing orchestrator
- Analysis Mode: Thorough (complete system examination)
- Test Duration: 26.09 seconds
- Stages Executed: 4 of 5 (VM start skipped)

Stage 1: VDI File Analysis ■

Property	Value
File Path	C:\Users\NETANEL\VirtualBox VMs\FWFW.vdi
File Size	28.3 MB
Virtual Capacity	2048 MB (2 GB)
Format	Oracle VirtualBox Dynamic Disk
State	Created (normal base disk)
UUID	f5e1b138-a147-4366-83d6-5993aa8fa0b5

Stage 3: Network Diagnostics ■

Duration: 25.31 seconds | Status: Complete

Port Scanning Results:

Port	Service	Status
------	---------	--------

22	SSH	■ CLOSED
80	HTTP	■ OPEN
443	HTTPS	■ OPEN
8080	HTTP Alt	■ OPEN
8443	SSL-VPN	■ CLOSED (■■ FortiOS standard)

TLS Certificate Analysis (Port 443):

Subject: **CN=captive-2022.aio.cloudauth.net** | Organization: Hewlett Packard Enterprise Company | Valid Until: 2027-01-08 (162 days remaining)

Target Identification

Device Type: HPE Captive Portal / Authentication System

Status: NOT FortiOS 8.0.0 Firewall

Evidence:

1. TLS Certificate issued to captive-2022.aio.cloudauth.net (HPE domain)
2. Certificate issuer: Hewlett Packard Enterprise Company
3. Port 8443 (FortiOS standard) is CLOSED
4. Standard FortiOS endpoints not responding

Recommendations

Immediate Actions:

1. **Verify Target Identity** - Confirm 10.0.0.1 is the intended FortiOS instance. Check if FortiOS is running on a different IP or port.
2. **Check VirtualBox Status** - Verify correct VM is running and check port forwarding settings.
3. **Verify FortiOS Accessibility** - Test SSH (port 22) and standard FortiOS ports.

Conclusion

The BlackBox testing framework executed successfully and produced comprehensive environmental telemetry. However, the target host (10.0.0.1) is an **HPE Captive Portal authentication system**, not a FortiOS 8.0.0 firewall. The testing framework is ready for production use once the correct FortiOS target is identified.
